

**Exemption List by County for
Section 93113, title 17, California Code of Regulations
Airborne Toxic Control Measure to Reduce Emissions of Air Toxics from Outdoor Residential Waste Burning (ATCM)**

January 2004

The ATCM contains two "prohibitions" that take effect on January 1, 2004:

Section 93113 (c)(1): "No person shall burn disallowed combustibles from any property for the purpose of disposing of waste material outdoors at a residence, except as provided under subsection (e), 'Exemptions', below."

"Disallowed Combustibles" means any waste or manufactured material, including but not limited to petroleum products and petroleum wastes; construction and demolition debris; coated wire; putrescible wastes; tires; tar; tarpaper; non-natural wood waste; processed or treated wood and wood products; metals; motor vehicle bodies and parts; rubber; synthetics; plastics, including plastic film, twine and pipe; fiberglass; styrofoam; garbage; trash; refuse; rubbish; disposable diapers; ashes; glass; industrial wastes; manufactured products; equipment; instruments; utensils; appliances; furniture; cloth; rags; paper or paper products; cardboard; boxes; crates; excelsior; offal; swill; carcass of a dead animal; manure; human or animal parts or wastes, including blood; and fecal- and food-contaminated material. For purposes of this regulation, dry, natural vegetation waste from yard maintenance is not a disallowed combustible, if reasonably free of dirt, soil and surface moisture.

Section 93113 (c)(2): "No person shall dispose of allowable combustibles from any property by burning them in a burn barrel or incinerator outdoors, except as provided under subsection (e), "Exemptions", below."

"Allowable Combustibles" means dry natural vegetation waste originating on the premises and reasonably free of dirt, soil and visible surface moisture.

Section 93113 (e) describes the procedure for establishing the "exemption areas." These exemption areas include all census area zip codes with a population density of 3 or fewer people per square mile, according to the most recent decennial census (year 2000). During 2003, all air districts were also given the opportunity to determine additional low population exemption areas. In these areas, the following can be allowed:

(a) burning dry, non-glossy paper and cardboard is allowed in addition to burning vegetation, and

(b) burn barrels or incinerators can be used to burn allowable combustibles (vegetation, paper or cardboard).

These exceptions do not apply where any local ordinance or enforceable mechanism is in place that otherwise prohibits the exception.

ARB has reviewed all of the "Requests for Exemptions" and approved all the exemption areas and exceptions described herein. The exemption areas and exceptions are listed by County and by zip code tabulation area (ZCTA), unless the respective air district used an alternate mapping unit to determine population density. Where applicable, the County page includes a link to a ZCTA map for that County. In most counties, residents should be able to check their zip code to find out if their residence falls within an exemption areas and what exceptions, if any, apply. Any alternative method for determining exemption areas will be explained on each county page for the respective air district. Appendix A lists whether an air district used an alternative population density mapping process or developed a separate District ATCM for their Request for Exemptions.

Prior to the adoption of the Statewide ATCM, several air districts had prohibited the use burn barrels and/or the burning residential waste. These counties are listed below. If you reside in one of the following counties, contact the appropriate air district to determine the extent to which residential burning is permitted in your area.

County	Air District	Residential Burning* Prohibited
Alameda County	• Bay Area Air Quality Management District	Yes
Contra Costa County	• Bay Area Air Quality Management District	Yes
Fresno County	• San Joaquin Valley Unified Air Pollution Control District	Yes

* "Census zip code" means a Zip Code[®] tabulation area, a statistical geographic entity that approximates the delivery area for a U.S. Postal Service five-digit Zip Code. Census zip codes are aggregations of census blocks that have the same predominate Zip Code associated with the mailing addresses in the U.S. Census Bureau's Master Address File. Census zip codes do not precisely depict Zip Code delivery areas, and do not include all Zip Codes used for mail delivery. For the purposes of this regulation, census zip codes are referenced to the most recent national decennial census completed by the U.S. Census Bureau.

** Population density" means the number of people per square mile within a census zip code. It is calculated as the number of people within a census zip code divided by the area of the census zip code after subtracting the population and area of all incorporated places within the census zip code.

*** Only dry natural vegetation waste, originating on the premises, and reasonably free of dirt, soil and visible surface moisture can be burned outdoors, if not already prohibited by local rule or ordinance. Burn barrels and incinerator use is prohibited.

¹ Residents of Kern County within the jurisdiction of the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD) have been prohibited from residential waste burning, and the use of burn barrels by the SJVUAPCD.

* "Census zip code" means a Zip Code[®] tabulation area, a statistical geographic entity that approximates the delivery area for a U.S. Postal Service five-digit Zip Code. Census zip codes are aggregations of census blocks that have the same predominate Zip Code associated with the mailing addresses in the U.S. Census Bureau's Master Address File. Census zip codes do not precisely depict Zip Code delivery areas, and do not include all Zip Codes used for mail delivery. For the purposes of this regulation, census zip codes are referenced to the most recent national decennial census completed by the U.S. Census Bureau.

** Population density" means the number of people per square mile within a census zip code. It is calculated as the number of people within a census zip code divided by the area of the census zip code after subtracting the population and area of all incorporated places within the census zip code.

*** Only dry natural vegetation waste, originating on the premises, and reasonably free of dirt, soil and visible surface moisture can be burned outdoors, if not already prohibited by local rule or ordinance. Burn barrels and incinerator use is prohibited.

* "Census zip code" means a Zip Code[®] tabulation area, a statistical geographic entity that approximates the delivery area for a U.S. Postal Service five-digit Zip Code. Census zip codes are aggregations of census blocks that have the same predominate Zip Code associated with the mailing addresses in the U.S. Census Bureau's Master Address File. Census zip codes do not precisely depict Zip Code delivery areas, and do not include all Zip Codes used for mail delivery. For the purposes of this regulation, census zip codes are referenced to the most recent national decennial census completed by the U.S. Census Bureau.

** Population density" means the number of people per square mile within a census zip code. It is calculated as the number of people within a census zip code divided by the area of the census zip code after subtracting the population and area of all incorporated places within the census zip code.

*** Only dry natural vegetation waste, originating on the premises, and reasonably free of dirt, soil and visible surface moisture can be burned outdoors, if not already prohibited by local rule or ordinance. Burn barrels and incinerator use is prohibited.
